Professional Scar Therapy

Silicone Scar Gel

Silicone Scar Sheet

Silicone gels and sheets are a

GOLD STANDARD

non-invasive therapy for the prevention and treatment of hypertrophic and keloid scarring

Eska-Med® Scar Gel

Eska-Med® Scar Gel is a transparent topical silicone-based gel for scar management and helping improve the appearance of surgical, traumatic & burn scars. The gel forms a flexible, breathable, semi-occlusive silicone layer on the scar that dries quickly and helps maintain epidermal hydration and supports the natural scar maturation process. It helps softening and smoothing the scar tissue and reducing scar-associated redness, itching, tightness, and discomfort.

Suitable For

- Scars following injuries, trauma, or burns
- Hypertrophic and keloid scars (old & new)
- Surgical scars, including caesarean section (C-section) scars
- Scars following cosmetic or dermatological procedures (blepharoplasty)

Features and Benefits

- Helps to soften and flatten scars
- Clinically proven formula
- Reduces redness, relieves itching and discomfort
- Suitable for children (3+ months) and adults
- Transparent and odorless
- Flexible and waterproof with 24-hour protection
- Can be used under make up

Advanced Silicone Formula

ESKA-MED® SCAR GEL features an advanced, optimized silicone-based formulation incorporating silicone elastomer, Polydimethylsiloxane (PDMS), Trisiloxane, and Tetrahexyldecyl Ascorbate. It forms a breathable, flexible protective film that helps maintain skin hydration, soothe scar-related itching and discomfort, and improve the appearance of scars and surrounding skin.

Eska-Med® Silicone Scar Sheet

Eska-Med® Silicone Scar Sheet is a thin, transparent medical-grade silicone sheet intended for scar management. The sheet is soft, flexible, and self-adhesive; forming a breathable, semi-occlusive barrier on the scar, helping maintain epidermal hydration and support natural scar maturation. This can help improve the scar appearance by helping soften & flatten raised scar tissue, and helping reduce scar-associated redness, itching, tightness & discomfort.

Suitable For

- Scars following injuries, trauma, or burns
- Hypertrophic and keloid scars (old & new)
- Surgical scars, including caesarean section (C-section) scars
- Scars following cosmetic or dermatological procedures (Abdominoplasty, Mammoplasty)
